SUMMARY

Hands-on engineering leader and Staff-level Software Architect with 18+ years of experience designing cloud architectures, leading engineering initiatives, and delivering large, multi-system platforms across healthcare, marketplaces, and enterprise domains. I have served as CTO, Product Chief Architect, Tech Lead, and Senior Engineer, owning architecture, technical roadmaps, hiring, and delivery, and I stay close to the code. Across two engagements at Perci Health (2021–2026), a UK digital-health company whose partners include L&G and Healix, I co-lead the architecture and backend of its care platform: FHIR interoperability on Medplum, care pathways, clinical workflow automation, and patient-data privacy. I'm frequently brought in to solve complex technical problems, unblock teams, and deliver critical product milestones under tight deadlines.

LEADERSHIP HIGHLIGHTS

- **Built a platform and helped build its team as CTO (Socionom):** defined the architecture, infrastructure, and technical roadmap of a greenfield platform; helped build the engineering team (3 FE, 3 BE) from sourcing to hiring recommendations; cut infrastructure and third-party costs by 5x (~30,000 USD/year).
- **Led architecture across teams (Aurea):** promoted to Product Chief Architect of a large supply-chain product; selected and orchestrated 12 cross-functional engineers from other teams; ran technical due diligence on three products with millions of lines of code before acquisition.
- **Co-lead of a digital-health platform (Perci Health):** co-lead the architecture and backend within a team of 7 engineers and designed the core backend foundations; played a key role in a high-stakes partner demo that directly supported new commercial agreements.
- **Worked directly with CEOs, founders, and CTOs** (Kana, Socionom, Perci, Nodia) to turn business needs into technical strategy; as Tech Lead at Kana, supported 3 full-stack engineers and helped mentor a fresh graduate.

SKILLS

- **Leadership:** technical strategy and roadmaps, architecture direction, hiring and technical interviews, mentoring, PR review standards, technical due diligence, cloud cost optimization, stakeholder management with founders and CEOs
- **Health-tech:** FHIR, Medplum, EMR/FHIR systems, healthcare interoperability, Awell care pathways, care-delivery and clinical workflows, secure messaging (Paubox, Postmark, GetStream), patient-data privacy (PII-free logging, role-based access)
- **Technology:** TypeScript, Node.js, C#/.NET, Go, React, Next.js; GCP (Firebase, Cloud Run, Pub/Sub), AWS, Azure, Terraform, Docker, GitHub Actions; PostgreSQL, Firestore, MS SQL, Redis, ClickHouse; Gemini, OpenAI

EXPERIENCE

Full-stack Developer — Perci Health

UK, remote · digital health · Apr 2025 – Present (contract ends Nov 2026)

- Rejoined Perci Health by request to co-lead the architecture and backend development of the next-generation healthcare platform, building a scalable Node.js/Firebase solution used across mobile and web clients within a team of 7 engineers.
- Designed core backend foundations (API patterns, Firestore schema, security, versioning) and introduced a custom concurrency-protection layer that prevents race conditions and guarantees state integrity across all APIs.
- Delivered end-to-end orchestration across scheduling, messaging, authentication, and care-pathway workflows, integrating systems such as Cal.com, GetStream, Awell, Medplum (FHIR), Descope, Customer.io, Slack, and Google Cloud Events.
- Protected patient data by keeping PII out of logs and limiting staff access to patient data to what each role needs.

Software Engineer — Checkatrade

UK, remote · marketplace · Feb 2024 – Mar 2025

- Contributed to the Core Platform team within a large UK marketplace company with more than 100 engineers, delivering shared tooling and platform upgrades used by more than 10 engineering teams across multiple products.
- Enhanced organization-wide libraries by implementing Streaming Pull support for GCP Pub/Sub consumers, eliminating hundreds of incorrect error reports per day; owned the migration of Google Cloud Functions from v1 to v2.

Full-stack Developer (Part time) — Perci Health
UK, remote · digital health · Jul 2021 – Feb 2024

- Served as the primary engineer for the Employee Benefits Program (EBP), a core subsystem enabling Perci's partnerships with employer benefit providers and supporting thousands of oncology-related support journeys; designed its full architecture with the CTO.
- Automated critical clinical and administrative workflows and delivered internal tools that reduced repetitive manual work for oncology nurses and improved turnaround time for case reviews.

Chief Technology Officer — Socionom
EdTech, remote · Jan 2021 – Dec 2023

- Joined a founder, former manager, as CTO to build a greenfield EdTech platform from scratch, defining the system architecture, infrastructure, and technical roadmap.
- Helped build the engineering team (3 FE, 3 BE) by sourcing candidates, conducting technical interviews, recommending hires, assigning tasks, reviewing PRs, and ensuring consistent architecture and code quality.
- Collaborated closely with the founder and product stakeholders, translating business needs into technical strategy and delivering key features under tight startup timelines.
- Designed cloud infrastructure in Yandex Cloud using Terraform with automated Dev, UAT, and Production environments, and reduced infrastructure and third-party service costs by 5x (~30,000 USD/year).
- Created comprehensive technical documentation, architectural diagrams, and long-term growth plans to support product scaling and onboarding.

Senior Full-Stack Engineer — Nodia
Germany, remote · Oct 2023 – Jan 2024

- Worked as the sole engineer with the two founders, delivering a complete, production-ready Web3/NFT application under an intensive timeline.

Software Engineering Tech Lead — Kana
UK, remote · pricing SaaS · Jan 2022 – Sep 2022

- Led the architectural design of a greenfield Pricing SaaS platform while working closely with the CEO and engineering team; served as the senior engineer, guiding architecture, reviewing PRs, supporting 3 full-stack engineers, and helping to mentor a fresh graduate.
- Delivered a high-throughput Go service that held 1M connections in load testing on 2 GB RAM, eliminating Node.js/GraphQL performance bottlenecks and reducing cloud resource consumption.

Product Chief Architect — Aurea Software
US, remote · Sep 2018 – Apr 2020 (C# .NET Chief Architect, Nov 2017 – Aug 2018)

- Provided technical due diligence for three mid- and large-scale products with millions of lines of code prior to acquisition, assessing architecture, risks, code quality, and integration readiness.
- Promoted from .NET Chief Architect to Product Chief Architect, owning the architecture of a large supply-chain product and defining its long-term evolution based on business needs.
- Exercised technical leadership via deep PR reviews and architectural guidance, selecting and orchestrating 12 cross-functional engineers (DevOps, QA, BE, FE, Security) from other teams.
- Migrated two products to AWS and cut infrastructure spend by several thousand USD/month by decommissioning dozens of unused VMs.

EARLIER ROLES

- **High Robotics**, Technical Founder, 2013–2014: founded a micro-studio and handled sales, product strategy, and engineering; delivered about five client projects in Chile and Germany.
- **Readify** (Melbourne, Australia), Sustained Engineering Developer, 2015: maintained 8+ production applications for enterprise clients across healthcare, logistics, mining, and insurance.
- **T-Systems International**, Principal Software Developer, 2012–2015: promoted from Senior Developer on an enterprise program of 80+ specialists for a major German automotive client.
- **Sensing Cloud SpA** (Full-stack Developer, 2016–2017), **Intourist – Thomas Cook** (.NET Developer, 2010–2012), and roles in Saint Petersburg, 2007–2010.

EDUCATION, CERTIFICATES, LANGUAGES

- Master's degree, Applied Mathematics — Information Technologies, Saint Petersburg State University, 2002–2008
- EITCA Artificial Intelligence Programme (2023); Microsoft Certified Solutions Developer: App Builder (2016)
- Languages: English (professional working), Russian (native), German (elementary), Spanish (elementary)
